

Statement of Purpose

Head and neck oncology demands not only surgical precision but also the ability to function effectively in high-volume clinical settings where timely intervention directly impacts patient outcomes. My early exposure to oncologic cases during postgraduate training highlighted the importance of surgical expertise in improving both survival and quality of life, motivating me to pursue advanced training in this field.

I am Dr. Y Sai Vaishnavi, currently working as an Assistant Professor in the Department of ENT at MNR Medical College & Hospital, with a focused clinical and academic interest in Head & Neck Oncology. Through my postgraduate training and subsequent clinical experience, I have developed a strong commitment to advancing my expertise in the surgical management of head and neck cancers.

My interest in this field began during my postgraduate training, where I assisted in head and neck oncology cases at MNJ Government Cancer Hospital. This foundational exposure was further strengthened through hands-on experience at Omega Cancer Hospital and subsequently at Tata Memorial Hospital, Mumbai, where I assisted in a significant number of advanced oncologic surgeries. These experiences have provided me with structured exposure to neck dissections, tumor resections, and multidisciplinary cancer care.

Currently, in my role as an Assistant Professor, I am actively involved in teaching undergraduate students, mentoring trainees, and performing as well as assisting ENT surgical procedures on a regular basis. Managing surgical cases alongside academic responsibilities has helped me develop strong clinical judgment, surgical confidence, and the ability to work efficiently in demanding clinical environments.

What strongly attracts me to Kidwai Memorial Institute of Oncology is its reputation as a high-volume tertiary cancer centre that provides extensive hands-on exposure in oncologic surgery. The opportunity to train in a setting with a large patient load and diverse case spectrum will allow me to further refine my surgical skills, decision-making ability, and efficiency in managing complex oncologic cases.

I am particularly interested in gaining deeper exposure to head and neck oncologic resections, neck dissections, and perioperative management in a high-volume setting. I am also keen to develop the ability to independently handle oncologic cases with confidence and precision, which I believe is best achieved through intensive clinical training.

My long-term goal is to establish myself as a skilled head and neck oncologic surgeon, contributing to both clinical practice and academic medicine. I aspire to deliver quality oncologic care, especially in settings where patient load is high and resources may be limited, while also continuing to contribute to teaching and research.

I believe that my clinical exposure across reputed cancer centres, surgical experience, academic background, and strong work ethic make me a suitable candidate for training at Kidwai Memorial Institute of Oncology. I am confident that this fellowship will significantly enhance my surgical capabilities and help me build a strong foundation in head and neck oncology.

Thank you for considering my application.

Sincerely,

Dr. Y Sai Vaishnavi

Assistant Professor, ENT Department

MNR Medical College & Hospital
